Abstract: *the production of software products, which is considered the basis for the development of the information and communication sector, is an important condition for the development of the national economy.*

Key words: *Electronic government, EUM programs, Apple store, google play "Best Soft Uzbekistan", etc.*

Introduction. Today, the production of software products, which are considered the basis of the development of the information and communication sphere, is of particular importance as an important condition for the development of the national economy. The effective use of information exchange technologies, which are actively used in every aspect of our life, depends on the uniqueness, popularity and innovative novelty of the software in them. The laws"on

informatization“,”on Telecommunications“,”on the protection of EHM programs and databases " are important in the development of the industry.

Today in our country there is no sphere in which information and communication technologies have not penetrated. This, in turn, opens a wide path to the consistent development of the softwares industry. In particular, more than 260 business entities engaged in the creation, production and implementation of software products are currently operating in our country.

MAIN PART. The necessary conditions for the formation and development of the software industry in our country, attention is paid to the creation of a solid legislative framework that is relevant to the industry. So far, more than 10 Laws, a number of decrees and resolutions of the president and the Cabinet of Ministers have been adopted. Regular measures are being taken to support programmers. The decision signed by our president on September 20 of this year “on measures to further strengthen the promotion of software tool developers of our country” was the next important step on this path.

As you know, the main income of software creators is spent on paying salaries to employees, regularly strengthening the necessary material and technical base. In this sense, it is especially noteworthy that the developers of software tools included in the National Register according to the decision are exempt from paying all types of taxes and mandatory deductions in the term until January 1, 2017, as well as customs duties (except customs clearance fees) on equipment, components, details, nodes, technology documents, software tools that are not produced in the Republic of Uzbekistan, These funds will be aimed at stimulating employees of software tool developers, developing and strengthening the material and technical base.

Currently, the authorities of state power and administration are an active consumer of software products. At the next time, relevant work is being carried out in our country on the cost estimates and business plans of ministries and departments, economic associations, large enterprises, on the automation of production processes, the creation of Information Systems and resources, the provision of software products and interactive public services. Since the current year, work has been launched on the formation and financing of the state order for the implementation of projects for the implementation of interagency integrated information systems of state authorities and management bodies, the creation of interagency data transmission networks, the formation of an “e-government” system and a national segment of the internet network.

This document promotes the development of the software industry, further improvement of the regulatory framework governing the use of specialized software products in state bodies, active participation of local companies in the implementation of the “Electronic hu-kumat” project.

In accordance with the resolution, www.software.uz the National Register of software tool developers, which is formed on the basis of the national catalog of software products and developers posted on the internet portal of the website of the National Register of software tool developers of our country, to establish a single electronic bank of information about software tool developers and support talented young programmers engaged in the creation of promising projects, providing information about the state and potential of the production market of software products, promoting the development of competitive national software products in domestic and foreign markets, serves to implement promising projects in this area.

The National Register is kept electronically on-line. Legal entities whose income from the development, implementation and sale of their own software tools is at least 50% of the total volume of goods, works, services sold by them are entered into the National Register on a voluntary and free basis. Also, for legal entities included in the National Register — developers of software tools, the validity period of the tax benefits provided for by this decision is extended to 2 years, if the volume of export of software tools of their own production amounted to at least 50% of the total volume of goods, works, services sold by them.

At the same time, the implementation of the decree of the president of the Republic of Uzbekistan dated January 5, 2006 “on measures to promote the expansion of cooperation between large industrial enterprises and production and services based on the development of industry” is also indicated in the decision to apply to legal entities included in the National Register-developers of software tools, if.

The current procedure for reducing the taxable base on the purchase of new technology equipment for the benefit of legal entities and a single tax payment will be introduced by enterprises and organizations of the Republic to the amount of funds directed to the purchase of software tools produced in our country as part of investment projects for the creation of Information Systems

Now software tool developers have the right to work on the production and service of software tools and export services to foreign currency without the presence of an export agreement through online stores of the internet network.

Currently, Apple Store, Google Play and a number of other on-line system operating stores allocate space from their platforms for software that complies with their standards and give developers the right to sell their products through the directories of these stores. Software in this catalog can be purchased through on-line payments from customers at any point of the Earth's surface. So, the National Register, established in accordance with the decision of our president, also provides software developers with the opportunity to sell their products directly through the internet, to conclude international agreements.

Since 2006, the exhibition of Software Products” Best Soft Uzbekistan ” has been organized. At the National Software Products Exhibition, the successes achieved in the field are demonstrated, master classes, presentations and educational seminars are discussed with the participation of leading specialists in the field of current projects and prospects of soft industry in the Republic. Representatives of international and domestic companies — manufacturers of software products and integrators, content producers, providers, scientific and educational institutions, ministries, departments also participate in the exhibition.

CONCLUSION. The organization of the activities of the technological park of software products and Information Technology, registration and deprivation of status of legal entities as residents, determines tax and Customs benefits for residents, the application of tax benefits by employees under employment contracts concluded with them, as well as the procedure for selecting and financing promising start-up projects.

Technological park of software products and information technology (next-Technopark) — Organization working with the placement of Technopark residents throughout the territory of the Republic in order to create maximally favorable conditions for the development of the production of information technology products on the basis of the principle of extraterritoriality within the territory of the Republic of Uzbekistan.
